Editing the Win 95 Registry for Object Snapping
With Middle Button of Logitech Mouse

DataCAD uses the middle mouse button to generate an Object Snap instead of a double-click. To disable the double-click and regain a standard middle mouse button click, you will need to make the following modification in the Windows 95 Registry.

1. Click on the Start button on the Windows 95 Desktop and select RUN.
2. In the Open input box, type **c:\windows\regedit.exe** and press [Enter].
3. From the Registry Editor screen, double click on HKEY_LOCAL_MACHINE.
4. Double-click on SOFTWARE.
5. Double-click on Logitech.
6. Double-click on MouseWare.
7. Double-click on CurrentVersion.
8. Find your device model from the list under CurrentVersion and double-click.
9. Click on the 0000 folder and to display information on the right side of the Registry Editor screen.
10. Under the Name column, double-click on the "DoubleClick" entry and the Edit String Dialogue box will appear.
11. Modify the Value Data line to read **001** and click [OK].
12. Exit the Registry Editor and restart Windows 95. The middle button should now perform a double click.
