

Importing and Exporting DWG files in DataCAD 8.52

Tips

- Always import the DWG file into a new DataCAD drawing file.
- When exporting DWG files, perform a Purge Sym and LayerUtil before writing out the file.

Exporting a DWG File

1. Open the DataCAD drawing you want to translate into a DWG file.
2. Choose Export / DWG / All Layers or On Layers from the File menu on the Menu Bar.
3. Enter a drawing name for the DWG file.
4. Choose Save.

DataCAD will export the DWG file.

Importing a DWG File

1. Copy the DWG file to your hard drive if it is on a diskette or attached to an email.
2. Choose Import from the File menu on the Menu Bar.
3. Select a file to read and choose Open.

DataCAD will import the DWG file. Perform a recalculation of the screen by selecting WindowIn Recalc from the View menu on the Menu Bar.
