

*3D motion control
and video animation system*

a new tool for a fast world

Velocity 3D is a unique and powerful software tool for creating complex animation and motion studies for direct output to videotape. A completely integrated system, Velocity 3D offers a radically different approach to modeling, designing motion paths, advanced rendering, and recording animations to videotape. No more wireframes: this is a new-generation package that manipulates solid models in real time.

Velocity 3D utilizes a powerful new dedicated graphics engine that provides significantly higher performance than systems using add-on boards for the PC or traditional graphics workstations. With this state-of-the-art processor, unprecedented power is now available to animators, researchers, and engineers at an affordable price.

FEATURES:

- **Real-time 3D animation previews with SOLID models.**
- **Real-time 3D interactive modeling and design.**
- **Real-time 3D object, path and light source editing.**
- **Advanced rendering capabilities: plastics, metals, glass, reflection and texture mapping, as well as shadow casting with full anti-aliasing for smooth, high quality images.**
- **Unlimited light sources including spots, keys and fills.**
- **Intuitive user interface for fast learning and operation.**
- **High-resolution Bitstream typeface library.**
- **Ability to read in models from other CAD and animation systems.**
- **Real-time music and sound effects interface option.**
- **Broadcast quality RS-170A NTSC output with genlock.**
- **Single-frame VTR controller for Betacam and 1" video recorders.**
- **Completely expandable system—new software updates quarterly.**
- **Unparalleled price/performance.**

Based on a highly intuitive and interactive icon-driven menu structure, Velocity 3D takes advantage of many breakthroughs in user interface design. This means you now have an uncompromising choice in purchasing an easy-to-learn animation system that is as powerful as it is fast and intelligent.

Circuit Studios, Inc. has created Velocity 3D as a video animation system suitable for broadcast-quality television production, as a CAD workstation for motion analysis and rendering 3D models for architectural design and mechanical engineering, and as a powerful tool for any application, from aerospace engineering to medical imaging, in which interactive animation is necessary for research and design.
